

SWIMMING POOL INSPECTIONS PROCEDURE - GAS PRESSURE

Revised April 25, 2017

Normal inspection sequence and testing procedures apply to all above ground, and underground gas lines to the pool, per current adopted codes.

Connection to the pool equipment is allowed, as long as there are gas stops in place and a valid pressure test during the inspection.

IMPORTANT- For any pool that a permit has been issued to your company in our jurisdiction that has received an approved gas pressure test **but has not received a clear final within 30 days of the gas pressure approval, a hold will be applied to any additional pool permits from obtaining gas pressure tests until that final has been passed and cleared.**

If due to architectural or other design requirements requiring more than 30 days from gas pressure to final, you must submit your request in writing.
